

SUPERIOR UNIVERSITY SARGODHA

Subject: ICT

Project Title:

ICT system requirements, target users and functionality

M Daniyal (SU72-BSAFM-25-002)

M Touseef (SU72-BSAFM-25-003)

Dawood Zafar (SU72-BSAFM-25-007)

M Hamza (SU72-BSAF-25-009)

ALI Haider (SU72-BSAF-25-010)

ICT System Requirements

TARGET USERS

Demographics:

Age, education level, language.

Technical Proficiency:

Are they advanced, intermediate, or novice computer users?

Frequency of Use:

Will they use the system daily, weekly, or occasionally?.

Role/Job Function:

How their job relates to the system (e.g., Data Entry Clerk, Customer Service Representative, Store Manager).

Specific Needs:

What tasks they need to accomplish using the system.

Functional System Requirements

(The System Must do)

Data Processing:

What data needs to be input, processed, and stored (e.g., * The system must calculate sales tax automatically).

User Interaction:

How users interact with the system (e.g., The system must allow users to search for products by category).

Reporting:

What information the system needs to output (e.g., The system, must generate a monthly sales report).

Security:

Specific access controls for different users (e.g., Only managers can delete records).

Non Functional System requirements

(The How Well the System MUST Perform)

Performance:

How fast the system must operate (e.g., The system must load any page in under 3 seconds).

Security:

Protecting the system and data (e.g., All user passwords must be encrypted).

Usability:

How easy the system is to learn and use (e.g., The user interface must be intuitive and follow standard design conventions).

Reliability:

The system's ability to operate without failure (e.g., The system must have 99.9% uptime).

Scalability:

The system's ability to handle increasing numbers of users or data (e.g., The system must support up to 1,000 concurrent users).

EXAMPLE

If the system is a simple Inventory Management tool for a small retail store:

Primary User:

Store Clerks (Need quick, easy-to-use interface for checking stock and recording sales).

Secondary User:

Store Manager (Needs access to reports and settings .
for inventory ordering)

Data visualization (ICT)

Action: Select the Customer Satisfaction Score data from the data Storage

Function: Use the visual Presentation feature to generation a 3D pie Chart showing the distribution of responses.

Result: Clear, graphical representation of market research findings.

Functionality

Functionality refers to the set of tasks or operations that the system is designed to perform, directly corresponding to the functional requirements. It describes the features available to the user.
